

UNIVERGE® ST500 Smartphone Client

Overview

Employees shouldn't be bound to a desk - they should have the capability to work from wherever their job takes them. NEC's UNIVERGE ST500 smartphone client for Android™ and Apple® mobile devices allow you to make and receive voice and video calls from virtually anywhere, as if you were sitting at your desk. It gives you the choice to either simply connect to Wi-Fi or use your mobile data (3G/4G) to handle your calls.

While in the office, the ST500 reduces cell phone minutes because the cellular network is bypassed – potentially saving your company money. When out of the office, take advantage of the Wi-Fi at home, a remote office or even at a public hotspot.

One number and one voicemail also simplifies things – no more missed calls or messages and no more confusion about which number is best to reach you. Also, by placing calls through your ST500, your work caller ID is displayed instead of your cell number – so it really does make it look like you are sitting at your desk.

In the Office

Always remain reachable as you roam freely around your office. Perfect for mobile staff members including housekeeping, warehouse staff, healthcare professionals or anyone who spends time away from their desk.

Out of the Office

Being out of the office shouldn't mean you miss an important call or video conference. Your smartphone doubles as an extension of your desktop phone with video capabilities. Remain productive and accessible from any location whether you are remote or at home.

ST500 at a Glance

- See the person you are talking to for improved communication across your organization
- Never miss an important call, your desk and smartphone client can both ring simultaneously
- Use Wi-Fi overseas to eliminate international roaming costs or domestically to reduce usage of cell phone minutes
- Simplify your communications – one number, one voicemail, one call history...
- Works on all modern Android and Apple mobile devices
